# Getting started with MySQL command line

# Hands-on Lab: Getting started with MySQL command line

Estimated time needed: 20 minutes

In this lab, you will use the MySQL command line interface (CLI) to create a database and to restore the structure and contents of tables. Then you will learn how to explore and query tables. Finally, you will learn how to dump/backup tables from database.

### Software Used in this Lab

In this lab, you will use MySQL. MySQL is a Relational Database Management System (RDBMS) designed to efficiently store, manipulate, and retrieve data.

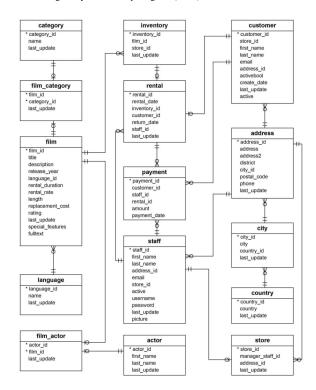

To complete this lab you will utilize the MySQL relational database service available as part of the IBM Skills Network Labs (SN Labs) Cloud IDE. SN Labs is a virtual lab environment used in this course.

# **Database Used in this Lab**

The Sakila database used in this lab comes from the following source: <a href="https://dev.mysql.com/doc/sakila/en/">https://dev.mysql.com/doc/sakila/en/</a> under <a href="New BSD license">New BSD license</a> [Copyright 2021 - Oracle Corporation].

You will use a modified version of the database for the lab, so to follow the lab instructions successfully please use the database provided with the lab, rather than the database from the original source.

The following entity relationship diagram (ERD) shows the schema of the Sakila database:

# **Objectives**

After completing this lab, you will be able to use the MySQL command line to:

- · Create a database.
- Restore the structure and data of a table.
- Explore and query tables.
- · Dump/backup tables from a database.

about:blank 1/8

# **Exercise**

In this exercise through different tasks, you will use the MySQL command line interface (CLI) to create a database and to restore the structure and contents of tables. Then you will learn how to explore and query tables. Finally, you will learn how to dump/backup tables from database.

### Task A: Create a database

1. Go to **Terminal > New Terminal** to open a terminal from the side by side launched Cloud IDE.

- 2. Copy the command below by clicking on the little copy button on the bottom right of the codeblock and then paste it into the terminal using Ctrl + V (Mac:  $\Re + V$ ) to fetch the <u>sakila\_mysql\_dump.sql</u> file to the Cloud IDE.
  - 1. 1
    1. wget https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBM-DB0110EN-SkillsNetwork/datasets/sakila/sakila\_mysql\_dump.sql
    Copied!

about:blank 2/8

```

```

3. Start the MySQL service session in the Cloud IDE using the command below in the terminal:

```
1. 1
1. start_mysql
```

4. Initiate the mysql command prompt session within MySQL service session using the command below in the terminal:

```
1. 1
1. mysql --host=127.0.0.1 --port=3306 --user=root --password
Copied!
```

When prompted, enter the password that was displayed when MySQL started up, as shown in the screenshot below.

```
theia@theiadocker-sandipsahajo:/home/project$ start_mysql
Starting your MySQL database...
This process can take up to a minute.

MySQL database started, waiting for all services to be ready....

Your MySQL database is now ready to use and available with usernal
You can access your MySQL database via:
• The browser at: https://sandipsahajo-8080.theiadocker-27.proxy
• CommandLine: mysql --host=127.0.0.1 --port=3306 --user=root ---
theia@theiadocker-sandipsahajo:/home/project$ mysql --host=127.0.0
Enter password:
```

about:blank 3/8

Please note, you won't be able to see your password when typing it in. Not to worry, this is expected!

- 5. Enter your MySQL service session password from the highlighted location of the terminal shown in the image above. Note down your MySQL service session password because you may need to use it later in the lab.
- 6. Create a new database sakila using the command below in the terminal and proceed to Task B:

```
    1. 1
    1. create database sakila;
    Copied!
```

```
theia@theiadocker-sandipsahajo:/home/project$ mysql --host=127.0.0
Enter password:
Welcome to the MySQL monitor. Commands end with; or \g.
Your MySQL connection id is 10
Server version: 8.0.22 MySQL Community Server - GPL

Copyright (c) 2000, 2020, Oracle and/or its affiliates. All rights

Oracle is a registered trademark of Oracle Corporation and/or its affiliates. Other names may be trademarks of their respective owners.

Type 'help;' or '\h' for help. Type '\c' to clear the current input
mysql> create database sakila;
Query OK, 1 row affected (0.01 sec)

mysql>
```

#### Task B: Restore the structure and data of a table

1. To use the newly created empty sakila database, use the command below in the terminal:

```
mysql> use sakila;
Database changed
```

2. Restore the sakila mysql dump file (containing the sakila database table definitions and data) to the newly created empty sakila database. A dump file is a text file that contains the data from a database in the form of SQL statements. This file can be imported using the command line with the following command:

```
1. 1
    1. source sakila_mysql_dump.sql;
Copied!
```

```
mysql> source sakila_mysql_dump.sql;
```

Note: You can use the **source** command to restore the database dump file within the mysql command prompt. To restore the database dump file outside of the mysql command prompt, you can use the mysql --host=127.0.0.1 --port=3306 --user=root --password sakila < sakila\_mysql\_dump.sql command after quitting the mysql command prompt session with command \q.

### Task C: Explore and query tables

1. To list all the tables names from the sakila database, use the command below in the terminal:

```
1. 1
   1. SHOW FULL TABLES WHERE table_type = 'BASE TABLE';
   Copied!
```

about:blank 4/8

```
mysql> SHOW FULL TABLES WHERE table_type = 'BASE TABLE';
  Tables in sakila |
                     Table_type
                      BASE TABLE
  actor
                      BASE TABLE
  address
                      BASE TABLE
  category
                      BASE TABLE
  city
                      BASE TABLE
  country
                      BASE TABLE
  customer
  film
                      BASE TABLE
                      BASE TABLE
  film_actor
  film category
                      BASE TABLE
                      BASE TABLE
  inventory
                      BASE TABLE
  language
                      BASE TABLE
  payment
  rental
                      BASE TABLE
                      BASE TABLE
  staff
                      BASE TABLE
  store
15 rows in set (0.00 sec)
mysql>
```

The Table\_type for these tables is BASE TABLE. BASE TABLE means that it is a table as opposed to a view (VIEW) or an INFORMATION\_SCHEMA view (SYSTEM VIEW).

2. Explore the structure of the **staff** table using the command below in the terminal:

```
    1. 1
    1. DESCRIBE staff;
    Copied!
```

```
mysql> DESCRIBE staff;
  Field
                                      Null
                                                    Default
                 Type
                                              Key
  staff_id
                 tinyint unsigned
                                      N0
                                              PRI
                                                    NULL
  first_name
                 varchar(45)
                                      N0
                                                    NULL
                 varchar(45)
                                      NO
                                                    NULL
  last_name
  address_id
                 smallint unsigned
                                      N0
                                              MUL
                                                    NULL
                                      YES
  picture
                 blob
                                                    NULL
                                      YES
  email
                 varchar(50)
                                                    NULL
                 tinyint unsigned
                                      Ν0
                                              MUL
                                                    NULL
  store_id
  active
                 tinyint(1)
                                      NO
                                                    1
                 varchar(16)
                                      N0
                                                    NULL
  username
  password
                 varchar(40)
                                      YES
                                                    NULL
                timestamp
                                      N0
                                                    CURRENT_TIMESTAME
  last_update
11 rows in set (0.00 sec)
mysql> [
```

To understand the output, see the following table:

Column Name	Definition
Field	Name of the column.
Type	Data type of the column.
Null	Displays~YES~if~column~can~contain~NULL~values~and~NO~if~not.~Notice~how~the~primary~key~displays~NO.

about:blank 5/8

Column Name

Definition

Definition

Displays the value PRI if the column is a primary key, UNI if the column is a unique key, and MUL if the column is a non-unique index in which one value can appear multiple times. If there is no value displayed, then the column isn't indexed or it's indexed as a secondary column. Please note, that if more than one of these values applies to the column, the value that appears will be displayed based on the following order: PRI, UNI, and MUL.

Default

Extra

Any additional information about a column.

3. Now retrieve all the records from the **staff** table using the command below in the terminal:

```
1. 1
   1. SELECT * FROM staff;
   Copied!
```

4. Quit the MySQL command prompt session using the command below in the terminal and proceed to Task D:

```
1. 1
1. \q
Copied!
```

```
mysql> \q
Bye
theia@theiadocker-sandipsahajo:/home/project$ ■
```

### Task D: Dump/backup tables from a database

1. Finally, dump/backup the staff table from the database using the command below in the terminal:

```
1. 1
1. mysqldump --host=127.0.0.1 --port=3306 --user=root --password sakila staff > sakila_staff_mysql_dump.sql
Copied!
```

This command will backup the staff table from the sakila database into a file called sakila\_staff\_mysql\_dump.sql.

2. Enter your MySQL service session password.

```
theia@theiadocker-sandipsahajo:/home/project$ mysqldump --host=127
Enter password:
```

3. To view the contents of the dump file within the terminal, use the command below:

```
1. 1
1. cat sakila_staff_mysql_dump.sql
Copied!
```

about:blank 6/8

```
theia@theiadocker-sandipsahajo:/home/project$ cat sakila staff mys
-- MySQL dump 10.13 Distrib 5.7.32, for Linux (x86_64)
-- Host: 127.0.0.1 Database: sakila
-- Server version
